

LABORATORY OBSERVATION/RECORD

Course: Full Stack Web Development

Course Code: 23CM4121

Experiment No.: 1.A

Student Name: V.Lekhya sri

Roll No.: A24126552123

Date:

1. TITLE

College Information Portal Using HTML5

2. AIM

- To design and develop a College Information Portal using HTML5 components.
 - To implement HTML5 elements such as tables, forms, lists, hyperlinks, images, multimedia, and semantic elements.
-

3. OBJECTIVE

- To understand the basic structure and components of HTML5.
 - To create a well-structured webpage for displaying college information.
 - To use text formatting elements such as bold, italic, underline, superscript, and subscript.
 - To create ordered and unordered lists for organizing information.
 - To design tables for displaying department and college-related details.
 - To create a student admission enquiry form using different HTML5 input types.
 - To implement hyperlinks, images, audio, video, and an iframe.
 - To use semantic HTML5 elements such as `header`, `nav`, `section`, `article`, and `footer`.
-

4. THEORY

HTML (HyperText Markup Language) is the standard markup language used to create and structure webpages. **HTML5** provides additional semantic elements, multimedia support, and improved form input types for developing modern webpages.

In this application, HTML5 is used to create a **College Information Portal** containing college details, courses, facilities, department information, an admission enquiry form, multimedia content, and useful links.

- **Headings and paragraphs** are used to display college information.
- **Text formatting elements** are used to emphasize and format specific content.
- **Ordered and unordered lists** are used to display courses and campus facilities.
- **Tables** are used to organize college and department information.
- **Images** are used to display the college campus.
- **Forms** are used to collect student admission information.
- **HTML5 input types** such as email, date, number, telephone, and file are used in the form.
- **Radio buttons and checkboxes** are used for selecting gender and skills.
- **Dropdown lists** are used to select the course.
- **Textarea** is used to collect the student's address.
- **Iframe** is used to embed the college location from Google Maps.
- **Audio and video** elements are used to embed multimedia content.
- **Hyperlinks** are provided for accessing the official college website and Google.
- **Semantic elements** such as **header** and **footer** are used to organize the webpage structure.

The basic flow of the webpage is:

HTML5 Structure → College Information → Tables & Lists → Admission Form → Multimedia & Links → Browser → Displayed Webpage

5. ALGORITHM / PROCEDURE

1. Start and create a valid HTML5 document using `<!DOCTYPE html>`.
2. Add the webpage title "**College Information Portal**" and create the header with the college name.
3. Display college information using headings, paragraphs, and text formatting tags.
4. Insert the college image using the `<img>` tag with appropriate `src` and `alt` attributes.
5. Create an ordered list for courses and an unordered list for campus facilities.
6. Create a department details table using `<table>`, `<tr>`, `<th>`, and `<td>` tags.
7. Create an admission enquiry form using HTML5 input types such as text, email, password, telephone, date, number, radio buttons, checkboxes, file upload, dropdown, and textarea.

8. Embed the college location using an `<iframe>` and add audio and video using HTML5 multimedia elements.
 9. Add hyperlinks to the official college website and Google.
 10. Create the footer with copyright information.
 11. Save the HTML file and open it in a web browser.
 12. Verify that all text, image, lists, table, form controls, links, map, audio, and video are displayed correctly.
 13. Stop.
-

6. PROGRAM

```
<!DOCTYPE html>
<html lang="en">

7. CODE EXPLANATION

HTML Tag / Code	Purpose
<code><!DOCTYPE html></code>	Declares the document type and HTML version (HTML5).
<code><html></code>	Represents the root element of an HTML document.
<code><head></code>	Contains document metadata such as title and character set.
<code><meta></code>	Specifies metadata like character encoding and viewport configuration.
<code><title></code>	Sets the title displayed on the browser tab.
<code><body></code>	Contains the visible content of the webpage.
<code><header></code>	Defines introductory content or navigation links at the top of the page.

<code><center></code>	Centers the contained text or elements horizontally.
<code><h1></code> , <code><h2></code> , <code><h3></code>	Defines HTML headings of different levels (h1 being highest priority).
<code><hr></code>	Inserts a horizontal rule / thematic break.
<code><p></code>	Defines a paragraph of text.
<code></code> , <code></code>	Applies bold text or strong importance emphasis.
<code><i></code> , <code></code>	Renders text in italic or with structural emphasis.
<code><u></code> , <code><ins></code>	Underlines text or highlights inserted text.
<code><sup></code>	Displays text as superscript.
<code><mark></code>	Highlights text for reference or notation purposes.
<code></code>	Displays text as deleted/strikethrough.
<code>
</code>	Inserts a single line break.
<code><table></code>	Creates a table to organize data into rows and columns.
<code><tr></code>	Defines a table row.
<code><th></code>	Defines a header cell in a table (bold and centered by default).
<code><td></code>	Defines a standard data cell in a table.
<code></code>	Embeds an image using src and alt attributes.
<code></code>	Creates an ordered (numbered) list.
<code></code>	Creates an unordered (bulleted) list.
<code></code>	Defines an item within an ordered or unordered list.
<code><form></code>	Creates an interactive form for user input submission.
<code><input></code>	Creates input controls (text, email, password, tel, date, number, radio, checkbox, file, submit).
<code><select></code>	Creates a drop-down selection list.
<code><option></code>	Defines an option within a drop-down list.
<code><textarea></code>	Defines a multi-line text input control.

<code><iframe></code>	Embeds an external webpage or media (e.g., Google Maps location).
<code><audio></code> , <code><source></code>	Embeds audio content and specifies media resources.
<code><video></code> , <code><source></code>	Embeds video content and specifies media resources.
<code><a></code>	Creates hyperlinks to other webpages or resources.
<code><footer></code>	Defines footer content such as copyright information.

8. TEST CASES AND EXECUTION DATA

Test Case	Test Description	Expected Result	Status
TC01	Open the HTML file	College portal loads correctly	Pass
TC01	Check image, lists and table	All elements display correctly	Pass
TC01	Fill the admission form	Form fields accept input	Pass
TC01	Check multimedia and hyperlinks	Audio, video and links work correctly	Pass

9. OUTPUT

COLLEGE INFORMATION PORTAL

Anil Neerukonda Institute of Technology and Sciences

About the College ANITS (Anil Neerukonda Institute of Technology and Sciences) is a <i>prestigious engineering college</i> located in Visakhapatnam. It was established in 2001 and offers <i>undergraduate</i> and <i>postgraduate</i> programs. The campus encourages <i>innovation</i> and <i>only-theoretical-learning practical learning</i> through workshops and projects.	College Campus College Image

10. RESULT

The **College Information Portal** was successfully developed using **HTML5**. The webpage was tested and all major components such as tables, forms, images, multimedia, and hyperlinks worked correctly.
